# FreshBite — Food Ordering App UI/UX

## UX-EC-001 | E-Commerce UI/UX | Mobile App UI/UX

**1. Project Overview** FreshBite is a mobile-first food ordering experience designed around fast restaurant discovery, simple menu customization, transparent checkout, and reassuring real-time delivery tracking.

**\*\*Goal:\*\*** Create a complete end-to-end food ordering flow that is visually friendly, easy to scan, and reduces friction at the moments that matter most.

**2. User Research & Personas** **\*\*Persona A — Aanya, Student (20)\*\*** - Orders 3–4 times/week. - Needs affordable meals and fast discovery. - Pain points: too many choices, unclear delivery time, hidden fees. - Goal: find a good meal and order in under five minutes.

**\*\*Persona B — Rohan, Professional (28)\*\***

- Orders lunch/dinner during busy workdays.
- Values reliable ETAs, saved addresses and quick reorder.
- Pain points: slow checkout and uncertainty after placing an order.
- Goal: repeat trusted orders with minimum effort.

**\*\*Persona C — Meera, Family User (36)\*\***

- Orders for multiple people.
- Needs clear customization and quantity controls.
- Pain points: confusing modifiers and cart mistakes.
- Goal: confidently review a larger order before paying.

**3. User Journey** 1. Open app → understand value proposition. 2. Browse/search → choose cuisine or restaurant. 3. Restaurant detail → scan rating, ETA and popular dishes. 4. Item detail → select size/extras/instructions. 5. Cart → adjust quantities and see total. 6. Checkout → confirm address/payment. 7. Tracking → understand current status and ETA. 8. Delivery → access order history/reorder later.

**4. Information Architecture** Home - Search - Cuisines - Recommended restaurants

Restaurants

- Search
- Filters

- Sort
- Restaurant cards

#### Restaurant Detail

- Restaurant information
- Menu categories
- Popular items

#### Item Detail

- Size
- Extras

- Subtotal/delivery/total

#### Checkout

- Address
- Payment
- Order summary

#### Orders

- Live tracking
- Order history

#### Profile

- Saved addresses
- Payment methods
- Notifications

**5. Wireframe Strategy** Low-fidelity structure prioritizes: - Search near the top. - Restaurant cards with rating + ETA. - Persistent cart access. - Clear primary CTA on each decision screen. - Short forms at checkout. - Status hierarchy on tracking.

**6. Visual Design System** **\*\*Colors\*\*** - Primary: #E84D8C - Secondary: #FF6B6B - Accent: #FCD34D - Background: light pink / #FFF7FA - Text: #1A1625

#### **\*\*Typography\*\***

- Headings: Poppins / bold
- Body: Inter / regular
- Base size: 16px
- Heading scale: 24px, 20px, 18px

#### **\*\*Components\*\***

- Rounded cards and inputs
- Subtle shadows
- Gradient primary buttons
- Pill filters/chips
- Image/food-led visual language
- Mobile bottom navigation

**7. Key UX Decisions** - Show ETA and rating directly on restaurant cards so users can compare without opening every result. - Keep customization on the item screen to avoid an overloaded restaurant page. - Show cart totals before checkout and again at payment. - Use a four-stage order tracker with a clear current state. - Use a strong, consistent pink CTA for the main action on each screen. - Preserve familiar food-delivery patterns while keeping the interface lightweight.

**8. Usability Testing Plan** **\*\*Tasks\*\*** 1. Find a pizza restaurant. 2. Add a customized item. 3. Change quantity in cart. 4. Complete checkout. 5. Find live order status.

**\*\*Success metrics\*\***

- Task completion rate
- Time on task
- Checkout abandonment
- Mis-taps / navigation errors
- Confidence rating after ordering

**\*\*Expected improvements\*\***

- Make delivery fees visible earlier.
- Keep customization labels explicit.
- Make the active tracking stage visually dominant.
- Keep one primary CTA per screen.

**9. Prototype Flow** Onboarding → Home → Restaurants → Restaurant Detail → Item Detail → Cart → Checkout → Tracking → Profile.

**10. 7-Day Timeline** **\*\*Day 1:\*\*** Research, competitor review, personas, journey map, moodboard. **\*\*Day 2:\*\*** Low-fidelity wireframes, navigation and core flows. **\*\*Day 3:\*\*** Visual design for onboarding, home and restaurant discovery. **\*\*Day 4:\*\*** Restaurant detail, item customization, cart and checkout. **\*\*Day 5:\*\*** Order tracking, profile and responsive states. **\*\*Day 6:\*\*** Interactive prototype, micro-interactions and usability testing. **\*\*Day 7:\*\*** Iterate, polish, accessibility checks and final handoff.

**11. Deliverables** - 9 high-fidelity screen previews - Responsive interactive HTML prototype - UX case-study documentation - Design system specification - User personas and journey - Usability testing plan - 7-day execution timeline
